# WaterPoint Network

## Put Your Utility in the Cloud - Securely

WaterPoint Network transforms the day-to-day management of the water utility, enabling real-time decisions in a real-time world.

- Easy mapping and editing of assets, activities, and utility issues

- Support for multiple utility infrastructures: Water, Wastewater, Stormwater, Gas, Electric, Streets

- Integration of 64seconds leak detection equipment

- Work order system that organizes asset, activity, issue and leak detection information

- Exchange GIS data (import & export)

- Export of WPN data and PDF reports

- Tech support - email, phone, on-site

- Secure syncing and data storage in the cloud

Asset Management

Map locations of utility assets: pipes, hydrants, valves, meters, and many others.

Asset information is always at your fingertips: location, manufacturer, model, photos, associated activities and notes.
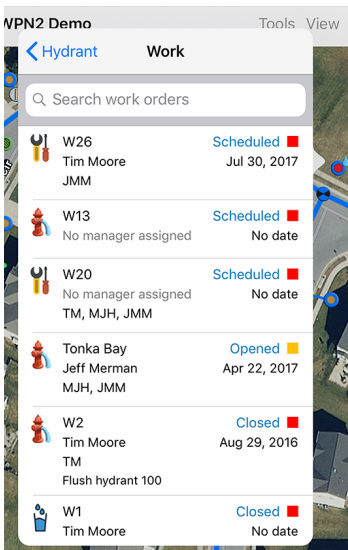

Activities Management

Track all activities, like hydrant flushing, repairs and installations.
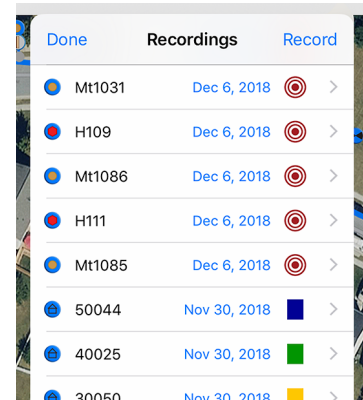

Log events, like water leaks and pipe breaks.

Work Order Management

Send work orders to field crews and track job status, materials and cost.

Leak Detection Management

WaterPoint leak detection equipment works inside WPN, enabling the utility to manage leak surveys and pinpoint, store and share data and results in real-time.

WPN Plus & Enterprise Benefits
- Training & support
- Multi-user synchronization
- Secured data backup
- GIS Data import & export
- WPN data export & PDF reports
- Data restoration
